

Day 2 — Tuesday, 27 May 2026

Preliminary Desk Review — International Standards and Reference Frameworks

Day 2 is a dedicated desk-review session. The objective is to extract the standards and competency benchmarks the curriculum must align with — not to read each document in full, but to build a structured standards reference table that will drive module design from Week 4 onwards. The output of today is that table, populated with source, standard, and applicable module.

Read in the priority order below. For each document, extract only what is operationally applicable to GSD's context at Rafic Hariri International Airport, land crossings, and the Lebanese coastline.

Block 01 · IOM and Migration Governance Frameworks

Start with IOM's own frameworks. These set the institutional language and the rights-based migration-governance logic that must run through every module. Read both documents in sequence before moving to external standards.

01 IOM IBG Framework and Data Protection Manual

IOM core

- ☐ Read the IOM IBG framework document: extract the definition of integrated border management, the five IBM pillars, and the competency expectations for border officials under an IOM-supported programme.
- ☐ Read the IOM Data Protection Manual: extract the ten IOM data protection principles, the definitions of personal data and sensitive data, the conditions for lawful processing, and the specific provisions on data sharing with third parties and law-enforcement agencies.
- ☐ Note the IOM data protection statement verbatim — it is the standard against which Module 10 (Data Protection, Ethics, and Information Security) will be validated.
- ☐ Record both sources in the standards reference table: source document, relevant principle or standard, and the module(s) it applies to.

Block 02 · ICAO Standards — Travel Documents and Passenger Data

ICAO produces the two most operationally specific standards sets for GSD's airport and document-examination functions. Read both, extracting the elements directly applicable to GSD officer tasks — not the full technical specifications, which are for system implementers.

02 ICAO Doc 9303 (MRTDs) and ICAO Doc 9957/Annex 9 Ch. 9 (API/PNR)

ICAO

- ☐ From ICAO Doc 9303: extract the MRZ structure for TD1, TD2, and TD3 documents; the check-digit calculation logic; the mandatory data fields; and the visual security features applicable to first-line inspection. Record against Module 02 (Travel Document Examination and Fraud Detection).

- From ICAO Doc 9957 / Annex 9 Chapter 9, Section B (API): extract the legal basis requirement for an API programme, the UN/EDIFACT PAXLST message format standard, the prohibition on non-standard data elements, and the 24/7 operational continuity requirement for API systems. Record against Module 03 (Passenger Data and Risk Analysis).
- From Section C (Electronic Travel Systems): extract the Digital Travel Authorization (DTA) standard and its operational implications for document verification at Rafic Hariri International Airport. Record against Module 02 and Module 03.
- From Section D (PNR): extract the PNR collection mandate under UNSC Resolution 2396 (2017), the Passenger Data Single Window concept, the data minimisation requirement under Standard 9.30, and the prohibition on requiring aircraft operators to collect non-standard data. Record against Module 03.
- Flag the iAPI distinction from batch API — this is the key operational distinction for GSD officers at the airport and must appear explicitly in Module 03 learning objectives.

Block 03 · Human Rights, Protection, and Anti-Trafficking Frameworks

These three documents provide the normative foundation for Modules 04, 05, and 06. Read them as an integrated set — the OHCHR principles, the UN Human Rights at International Borders training resource, and the UNODC counter-trafficking toolkit address overlapping populations and must be cross-referenced.

03 OHCHR
Guidelines on HR
at IBs; UN HR and
IBsT. Resource;
UNODC HT
Toolkit

Protection

- From the OHCHR Principles and Guidelines: extract the ten recommended principles, the definitions of border authorities and border governance measures, and the operational guidelines on screening, interviewing, identification, and referral. Pay particular attention to Guidelines 6 (screening and data collection), 7 (identification and referral), and 8 (gender, age, and vulnerability). Record against Modules 04, 05, and 06.
- Extract the OHCHR interviewing guidance: non-coercive techniques, age-and-gender-sensitive communication, use of interpreters, and the prohibition on compulsory health testing at the border. Record against Module 04 and Module 06.
- From the UN Human Rights at International Borders training resource: extract the trafficking-versus-smuggling distinction table (act, means, purpose, consent, transnationality) — this is a direct training tool for Module 05. Extract also the vulnerability indicators applicable to border screening.
- From the UNODC toolkit: extract the trafficking indicators for front-line officers, the referral pathway logic, and the victim-centred approach principles. Record against Module 05.
- Note where the three frameworks overlap on vulnerability identification and non-criminalisation of victims — these convergence points become the core learning objectives for Modules 04 and 05.

Block 04 · Maritime, Health, and Operational Governance Standards

Complete the desk review with the three remaining standards bodies. These are shorter extractions — the objective is to identify the mandatory obligations and competency requirements applicable to GSD's maritime and health functions, not to master the full instruments.

04 IMO FAL 50
Outcomes; WHO
IHR PoE
Benchmarks;
IOM World
Migration R 2026

Operations

- ☐ From IMO FAL 50 outcomes: extract the digitalization and maritime facilitation decisions applicable to port State operations, crew and passenger formalities, and the single-window concept for maritime border processing. Record against Module 08 (Search and Rescue — Maritime Border Component).
- ☐ From WHO IHR Points of Entry Benchmarks: extract the eight core capacity requirements for designated points of entry — staffing, medical services, screening space, contingency plans, entry/exit controls, communication, equipment, and referral pathways. Record against Module 07 (Migration Health and Vulnerability Screening).
- ☐ Extract the WHO guidance on health-based entry restrictions: human-rights-compliant screening, voluntary testing, informed consent, and the prohibition on compulsory testing for HIV, tuberculosis, and pregnancy. Cross-reference against the OHCHR principles already recorded in Block 03.
- ☐ From the IOM World Migration Report 2026: extract the Lebanon-specific migration data and displacement trends — these provide the operational context figures that will ground scenario development in the training package. Record as contextual reference rather than standards.

Standards Reference Table — Day 2 Output

Populate this table progressively as each block is completed. The completed table becomes Annex A of the Inception Report and the validation benchmark for Deliverable 3 (Draft Training Package).

Source document	Standard / principle	Applicable module(s)
IOM IBG Framework	Five IBM pillars; competency expectations for border officials	All modules
IOM Data Protection Manual	Ten data protection principles; lawful processing conditions; third-party data sharing	Module 10
ICAO Doc 9303	MRZ structure (TD1/TD2/TD3); check-digit logic; visual security features	Module 02
ICAO Doc 9957 / Annex 9 Ch.9 — API	PAXLST format; no non-standard data elements; 24/7 continuity requirement	Module 03
ICAO Doc 9957 / Annex 9 Ch.9 — PNR	UNSC Res. 2396 (2017) mandate; Single Window; data minimisation (Std 9.30)	Module 03
ICAO Doc 9957 — DTA	Digital Travel Authorization specification; verification at points of entry	Modules 02, 03

OHCHR Principles and Guidelines	Principles 1–10; Guidelines 6, 7, 8 — screening, interviewing, referral	Modules 04, 05, 06
UN HR International Borders	Trafficking vs. smuggling distinction table; vulnerability indicators	Modules 04, 05
UNODC HT Toolkit	Front-line trafficking indicators; referral pathway logic; victim-centred approach	Module 05
IMO FAL 50	Maritime digitalization; single-window for ports; crew/passenger formalities	Module 08
WHO IHR Points of Entry	Eight core capacity requirements; health-based entry restrictions — HR compliance	Module 07
IOM World Migration Report 2026	Lebanon migration and displacement data — scenario context figures	All modules — context

End-of-Day Verification

Before closing Day 2, verify the following items are complete. Any outstanding block carries over as the first task of Day 3 — do not compress the review by skipping extraction steps.

- ☐ Block 01 complete — IOM IBG framework and data protection principles extracted and recorded
- ☐ Block 02 complete — ICAO MRZ standards, API/PNR requirements, and DTA specification extracted and recorded
- ☐ Block 03 complete — OHCHR principles, UN HR training resource, and UNODC toolkit extracted and cross-referenced
- ☐ Block 04 complete — IMO FAL 50, WHO IHR, and IOM World Migration Report 2026 extracted and recorded
- ☐ Standards reference table populated with all 12 source entries — source, standard, and module column complete
- ☐ Day 1 issue log updated — any document access delays or gaps noted
